

What are CTE's > can be created from multiple tables
using the (WITH) Function

Temp table > is a way of summarizing a

When do we know which one can use

CTE

Temp table

> You can use one and
try another one

Temporary table > getting a snippet of a big table in small parts.
> Summarizing a big table (only exist in a)

Breaks large query into
^{smaller steps}

> ~~break it down~~ (session of coding)

it must not include the
catalog name or
schema name

> or break it up part

becz is not saved on the database.

CTE > is a combined code you combine all codes at once.

• Explain to me temporary table in databricks sql

Temporary table > a table that exist

↓

If you have a big ~~temp~~ table, you need to break it down
so in to smaller parts so that we can have a focused
way of analysing data

Big code explanation.

US CTE with user profile AS > only related to
user profile

(select user ID,

Retail Sales Data Agent.

Taj Moghulwani Student No: Date.

• Introduction & objective.

This is a retail sales data agent project to help a business users, manager or a CEO ask questions about a shop's sales performance and receive useful business insights - in plain language.

• Dataset Description

* What is in retail sales data and what each column mean.

• Screen shots → ~~1~~ Upload

* Review

* table prep.

* agent set up.

* instructions.

• Your agent instructions in full.

• The 10 questions and answers.

• validation of 3 answers.

• What our data revealed about the shop's sales (key insights)

• Business recommendation

• Conclusion.

Columns 9.

1 Transaction id

2 Date

3 customer id

4 Gender

5 Age

6 Product category

7 quantity

8 Price per unit

9 Total amount

Q

What's in the retail ^{sales} data set - this retail data set contains shows that the store sells is selling electronics, clothing and beauty products. It contains 9 columns.

• The retail data set contains information about a store that sells electronics, clothing and beauty products.
